

AP Calculus

Mr. Reed

1. AP Calculus is a college-level mathematics course that builds upon concepts and knowledge presented in previous math courses, including Algebra, Geometry, and Trigonometry. Some of the topics that are planned to be covered in the course include limits, continuity, derivatives, and integrals. This course is designed to strengthen your mathematical skills and prepare you for the AP Calculus AB exam.
2. Good conduct, respect for others, and honesty are expected at all times.
3. Each student's grade will be primarily determined from his test scores, assignments, and binder with notes.
4. The materials needed for class each day are:
 - binder (as specified in class)
 - notebook paper
 - pencil or pen
 - TI-89 graphing calculator
5. Calculators will be used in the course at the teacher's discretion and may not be shared.
6. You are required to check your answers to your homework at home at <http://reedcalc.wikidot.com>.
7. You are encouraged to ask questions and are welcome to obtain extra help from me.

Have a good year!
